The offer applies to apartments in all cities in which the developer operates and allows to save an approximate of over PLN 38 thousand per one transaction.

All apartments in the special pool have got balconies, terraces or gardens, as well as some innovative technologies, providing security and comfort to their future tenants. As a standard, they are equipped with the Home Management System (HMS), a technology allowing the use of smart-home – intelligent home automation solutions. They let one control lighting, indoor window blinds and close water valves, thus protecting the apartment against flooding. At the same time, they ensure full control over utilities, thanks to which electricity and heating consumption may be lowered by up to 28% per year. Future tenants will also be able to manage the apartment using a panel on the wall, i.e. hotel function.

Each new apartment in the promotion has also been equipped with an anti-smog package – an advanced solution protecting the interiors from the harmful effects of pollution. The package is based on nanofiber filters installed inside window diffusers, which hold off solid and liquid particles of smog, bacteria, dust, pollens, mould or mites. The technology provides efficient protection against pollution while maintaining excellent air permeability to the apartment.
